                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ないな。 いかかれいし につばいばいかはれいかのれいたにつすいかいしたい ないかいしかい                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Bidh quality sequence stops: 274 Sequence: (MAGE Description, LLN). ALIGNMENTS

```
Rewisolated integrin-linked server, the wint floase of selding develop products to medulate coll growth, adhesion, migration and develop products to medulate coll growth, adhesion, migration and invasion, e.g. for treating cancer or inflammation

Invasion, e.g. for treating cancer or inflammation

Invasion as integrin-linked kinse, designated in a partial can be used to medulate cell growth, adhesion, migration and invasion. It was isolated from a human placental cDNA library using a partial cDNA, BIT-9, that had been obtd. In a two-hybrid screen using a bait plasmid expressing the integrin bera-1 subunit cytoplasmic domain. The ILK chromosomal locus has been mapped to inpls, a region implicated in a subset of breast carcinomas, inherited cardiac arrythmia and long QT syndrome. Ilk nucleic
                                        Human integrin-linked kinase (ILK) cDNA.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       File (including an isomer) can be used in done therapy to inhibit INX wite-ski mit to the treatment of real variet. Texturial solid to the real matery disease, arthritis, osterporosis and build real can dead on also be used as diagnostics to                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    arinadadadadadadadadagaadadtateeeqacteggaatttetegeatid 900
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 A twa than in the titenantsan avirat techanication and animatic trensitien govern                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      distill in medical diagnosis.

Claim 2: Page II: TSpp: Bnglish.

The sequence is an example of their can be from 2 to 50 T's in the mover for use in the invention. There can be from 2 to 50 T's in the loop region. A probe sequence is ligated to the 3 end of the promoter region. Open hyprilation of the probe to a target sequence promoter region. Open hyprilations of the probe to a target sequence and ligation of the hybridised target sequence can be transcribed by maligheliarization of the soften and incorming sequence, the target sequence can be transcribed by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        gabs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Solf-complementary, stylphomorph haliphorphomens sequence #2.

New Secreted proteins encoded clones present in ANU 2026.

New Secreted proteins encoded clones present in ANU 2026.

New Secreted proteins cell proliferation/differentiation

requiating, manumodulating and many other activities

claim 9. Page 76-77: 139pp; English man secreted protein deposited

cunder accession number ATC 90.76 in the serior of protein deposited

cunder accession number ATC 90.76 in the serior of protein deposited

cunder accession number ATC 90.76 in the serior of protein deposited

cunder accession number ATC 90.76 in the serior of protein deposited

cunder accession number ATC 90.76 in the serior of deposited

cunder accession number ATC 90.76 in the serior of deposited

cunder connate higher interactions and as mutitional supplies that

cell included their interactions and an artivities although no evidence

for any is provided in the specification injection of their options into activities although activities of the control of other options in number of harmarteries although induction of other cyclosines infection. Cancer, autoimmine activity and altergy; required provides (e.g., for treating activities of the control of certility). Lemonts independently in the serior of the control of certility in the serior of the control of activity (e.g., for treating portions) activity (e.g., for treating portions) behaviour, and many others. Also contemplated is the use of the corresponding nucleic activity activities

contemplated is the use of the corresponding nucleic activity activities.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ...

                                                                                                                                                                                                                                                                                                                                                                                                                                                              Plans Fry. metacopole and control.

Zeamatin cDNA may be obtained using standard bNA techniques, and may be expressed under the control of the constitutive 45s promoting transgenic plants - plants expression high zeamatin, levels large contained resistance to plant pathoders. Seamatin, levels large synergistic antifungal proteins (SAFPS), synergise with other antibotics such as nikkomycin. Alone, they display tunoloide activity against fungi including Newpospera and Interpretation.
                                                                                                                                                                                                                                                                                                                                                                                                           ENA encoding Synergistic Anti-Fundal Profein - obtained from cotto, sorghum and oat, used in synergistic compsus, against find i and yeasts, e.g. Neurospora and Candida.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         0) Mismatches 0; Indels 0; days
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Chactonium and transmium.

N.B. On decoding this cDNA sequence, the complete remarks profess.

Sequence given in SEQ ID NO.4 is not obtained.

This sequence encodes a recombinant human alpha interferon (IFN) receptor protein useful for the testing of IFN agonists and for treatment and diagnosis of Viral diseases and transurs. Antibodies raised against this protein can be used for blocking the receptor when required, e.g. where overexpression of alpha IFN is harmful. The Abs are also useful for e.g. dup targetting. Variants of the protein, having residue [64 (IAT) Problem 20 August 2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New human alpha-interferon receptor protein - useful for testing

Piconi and diagnosis Piconch.

Piconi and diagnosis Colored to the ecupanic sequence corresponds to the ecupanic sequence corresponds to the ecupanic sequence corresponds to the ecupanic strain KI pre-erythrocytic liver stage antique ( ISA-+) conception (W44790). The gene sequence was isolated and income in a sequence sequence sequence in the sequence of colore 729s was used to serve in the sequence of solated, clone 729s was used to serve a library generated tree in the sequence of solated, clone contained a 6.85 kb insert including the sequence of persented here. The gene organisation comprises a light region encoding to presented here. The gene organisation comprises a light region encoding to presented here invented to the gene organisation containing a 1.8 kb tendion encoding to a glycosyl-phosphatidylinositol membrane and allowed from the LSA-1 polypeptides of at loast to experience. The invented from the LSA-1 polypeptide with the exemption of and as vaccines for immunotherapy of malaria. 1746 to 1740 to 174
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         to promote neuronal regeneration, revascularisation or would bealled for treatment of chronic neurodedenerative diseases (e.g. Althouses).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Warts avoidably to the control of th

DNA sequences representing aberrant forms of human high mobility group protein genes - useful for treatment of endometriosis and group protein genes - useful for treatment of endometriosis and tumours, or for modulating vascularisation, etc claim: Fig 13, 58pp German.

Py Claim: Fig 13, 58pp German.

Cy Vor80-VO288 are cDNA sequences that connote aberrant forms of the human high mobility group protein (HMG) gene, HMGI-C, which is located on conformation product but not the protein binding denial. These sequences encode the DNA binding part of the cranslation product but not the protein binding denial. Such HMGI-C, protein can be used in Kits to modulate vascularization and this can reduce ablock or stimulate angloses and reported on the proteins of the car improve vascular provision in myocardium damaged by infarction. Such Contraction (local or or all and for tissue responsable) in degenerating or damaged tissue. The responsable can be applied to the carrently impression method can be applied to use up to local or or all value and method can be applied to use up to locate the carrently impressive responsable in another analyzabacit shock, is avoid all 13 % 119 % 12 % 13
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                DNA sequences representing aberrant forms of human high mobility group protein genes - useful for treatment of endometricals and group protein genes - useful for treatment of endometricals and claim 1. Fig 2: 58pp; derman.

V02896-V02898 are cDNA sequences that encode aberrant forms of the fundamental mobility group protein (HMS) gene, which is located on chromosome 12. These sequences encode the DNA binding part of the translation product but not the protein binding domain. These proteins antibodies derived from these proteins or expression modulators of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     dal tratoga

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                S-1817
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Disclosure, payed 42-43: 64pp. Entilsh.
Olgonucleotides corresp. to the partial sequence of insecticibility protein FLL376 were used as primers for leveraging score in the partial protein FLL376 were used to transform E. english sequence into pks and used to transform E. english score FLL-755 encoded a 249-amino acid protein (aiven, in 87-79.) that from become a precursor of FLL-376. Expression of such proteins endiffrom becomeously vectors is used for biological control of sequence 94, RPP. 322 A; 172 C, 194-61.
      /note= tages at positions 1-14 and not dispuse in the specification."

6 This sequence represents murline osterogenic protein (CF):1 CDNA. OP-1 is not the pro-domain and one thin of this sequence. From incleolides of the pro-domain and one thin of this sequence. From incleolides of the problem one detect OP-1 mPNA expression. Using this probe sequence of the detect oP-1 mPNA expression. Using this probe sequence of and monoclonal antibodies, it is possible to identify substances that are capable of inducing bone formation by determining that is effect to 15-1 can make expression. Compounds identified in the capable of inducing home formation by determining that are identified in the bone disease, osp. osteoporosis. Compounds that are identified in the capable rapid and sensitive valuetion of candidate compounds. Has it can provide rapid and sensitive valuetion of candidate compounds. Has it can provide rapid and sensitive valuetion of candidate compounds. Also considered within the stype of the production and open that it determent of osteoper production of candidate compounds. Screening ordes, to determine ability to morphogon, proceeding orders, to determine ability to morphogon, by assaying test tissue type only it judicative of a prodn. level change of morphogon; it judicative of a prodn. level change of morphogon; prodn. level change of morphogon is nactive when reduced but is active as an embryo. This morphogon is lactive when combination with other oxidised in combination with other oxidised in combination with other oxidised homodimer and when oxidised in combination with other of prodning the morphogons are capable of slimitarion of prodning of prodning the proliferation of differentiation of prodning the arowth an amintenance of differentiation of these including the rodifferentiation of transformed cells. These morphogons may also be capable of induction redifferentiation of sequence 1873 BP; 435 A; 589 C; 469 G; 460 1;

Protecting individuals at risk for loss of bone mass such as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        postmenopausal females, aged individuals and individuals underpointed dialysis. The loss of bone mass may result from an indudence in pencerescoption or bone formation, an imbalance of valcium or the splate metabolism, a vitamin D imbalance of the putility of individual.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The sequence is that encoding mouse estrogenic protein; (men-1) a a merphogenically active protein which may be used as part of a method for treating a bone fracture or a disease which causes or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    results in bone fractures or other detects in skeletal microstructure. Such diseases include chronic roum; tallure and other kidney diseases, osteomalacia, vitamin D definiency; indired osteopenia or osteoperosis, postmenopausal or semile estemporasis,

Freatment of chronic renal failure - using an osteogenic protein/bone morphogenetic protein renal thorapoutic agent or protein/bone morphogenetic protein renal thorapoutic agent or renal mesenchymal progenitor cells userlosure: Page 57-59; ll3pp; English.

This cDNA sequence encodes the mouse osteogenic protein, OP 1. This protein is used in a method for the treatment of a mammal haring or at risk of, chronic renal failure which compress administering or at otherwhole genetic protein (UPJEMP) renal or obtained failure with compression or the method can be used for treatling e.g. thermic renal failure, end-stage in a disease, chronic renal failure, end-stage in disease, chronic renal failure, end-stage in disease, chronic nephrotein, diabetic glomerulegathy, diabetic renal hyperthology in a patient of morphogenesis, hyperthesis or a patient affined with e.g. glomerules in the intending patients of diomeruloscierosis, tubulointersitial sciences of the renal librosis. Such therefore agents can present, thill the distribution agents can present, thill the distribution agents can present the progressive deviation to the need for intended for
                                                                                                                                                                                                                                                                                                                                                                                                                                A hybridisation probe specific to the Constminus of the ENK encoding human (B1 was prepared (base pairs 10%4/15% of 10%4518). The ENK encoding thoman (B1 was prepared (base pairs 10%4/15% of 10%4518). The clabelled probe was used to screen ca. Pour over propages of an order of times 17.5 days p.c. mouse entry 5° structh CNA 411 100 10% of the confidence of the Streething of Structh CNA 411 100 10% of the confidence of the DNA was subcloned and sequenced. Two different DNA sequences were identified; mopel and mopel (mopel is not assembled in this patent specification). The mobil DNA course for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       isteogralo protein; OP-1; bone morphojenio protein, ufjamp family; chronic renal fallure; renal therageutio agent; disease; diabetes; chhropathy; glomerulopathy; hypertrophy; sclearses; rephritis; modynosas, glomerulopathy; hypertrophy; sclearses; rephritis; modyschasia, fibrosis, glomerular filtratic; rate, GFE, ss.

DNA encoding anti-sense RNA blocking plant APT Synthase expression of succession and columns 63-68. 91pp. Endish, the delayed trait ripering Example 3; Columns 63-68. 91pp. Endish.

The present sequence encodes tomato
The present sequence encodes tomato
I aminocyclopropanel-carboxylic acid / Arch synthases from synthase was used in the isolation of emesoryed sequences from synthase was used in the isolation of emesoryed sequences from and two zucchini (CP-ACC 1A, LE-ACC 1B), LE-ACC 1B, ACC Synthases.

The remato (LE-ACC 1A, LE-ACC 1B) ACC synthases.

The run and two zucchini (CP-ACC 1A, and CP-ACC 1B) ACC synthases.

Contained in a plant host cell, generates RNA (hat is sufficiently complementary to an RNA transcript of an endoachous APT synthases.

Complementary to an RNA transcript of an endoachous APT synthases.

The reverse transcript of the antisense RNA (i.e. dNA) operably included to control sequences that effect its transcription into the ACC synthase gene by primer pairs encoding conserved APT synthases sequences. The DNA molecule can be used to delay ripening of temata or anceding femile.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Siles
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        A subset of yeast ARS elements act as chromosome origins of the replication. A multi-protein complex that recognises the ARS Consensus sequence (ACS) is called the origin recognises the ARS function of ACS. It bind to more than 10 yeast ARS elements. It inveditors the submits, ORC was extracted from B1296 colls and GV submits were submits, ORC was extracted from B1296 colls and GV submits were significated by the Action of ACS. To clone the grade of the protein of the collision of ACS and the series of the first of the 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ORCS gene encoding a subunit of yeast origin of DNA replication. Origin of replication complex: ARS element; subunit; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             identify agents useful in the diagnosis, prognosis and freatment

Human trophinh cowa.
Trophinh. Lieffleton-seeleting protein. Lasting bysting lasting
Embryo implantation. Infortility, obli adhosion, therapy, diagnosis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Recombinant production of PIGII allows the study of the structure, function and role in non-generic of the protein. PIGII and truction acid encoding it can also be used to develop products for use in treating tumousts and canner and in the diagnosis of canner sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           p-PSDB: R89895].
Now Isolated numbers acid encoding p53 response protein PIGI-1 reset to develop prods. for the study, diagnosis and treatment of theories and cancer. Staim 3: Pigure 5, 58pp, English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Unity Watth

Mammalian trophinin and trophinin-assisting protein - used in infibiting or enhancing embry implantation, diadrosis of infertillity and treatment of cancer claim 16. Fig 3, 106pp. English.

A GENA -lone (118673) codes for human trophinin (#34889), a protein the cell mambrate of trophinist and uterine epithelial cells. It was obtd. from a trophoblast HT-H cell cDNA library Expressed in GCS-I cells using a cell allestic streenies protocol. The cDNA can be used for produ. of recombinant trophinin or its active fragments (see I18674-75), as a prote to fitted the presence of trophinin-encoding sequences, or can be introduced into cells to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

and transformed yeat cells able to ferment lacture in when Disclosure: Fig 2: 35pp; English.

Claimed sequence includes a Beta-galactosidase lach acree from Aspergillus niger and the Abril yeast premoter in plasmid serior pVKI. The plasmid is used to transform a yeast expression system to produce BG extracellularly or into the periplasmic space, useful in fermenting lactose to produce Edge extracellularly or into the periplasmic space, useful in Sequence 3192 BP: 773 A: R74 C; 786 G; 759 T;
                                 The sequence encodes Drosophila heat shock factor protein and was obtained by screening a Drosophila heat shock factor protein and was obtained by screening a Drosophila genomic library with olinor nuclearlide protes (01237, 01328) based on the HSF anchor and sequence. The HSF sequence can be used to identify the HSF across to other organisms and also for the detection of stress or a discussed state in living systems. The gene can be used to increase expression of other genes. The gene can be used to increase together with other genes linked to host shock elements. It can be linked to a tissue-general or tissue-specific promoter and introduced into transgenic mice as a tool for cliniting increased or chronic stress response conditions as a model for how issues
                                                                                                                                                                                                                                                                                                                                                                                                                                       Salri.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CONA ''

clones reactive with polyclonal serum were evaluated to identify those encoding 4p116. Three such clones (PCS. PCS and Pc14) were sequenced and contained ORFS encoding closely related but distinct profess. Although none of the clones contained the complete closes and generation of a putative composite sequence encoding a protein of ca. 122 kD. PCF was used to screen a second CDNA library constructed in modified lamplatable. Any VIELL Fig. 10 to contain ORFS encoding proteins similar to the original applic clones. GPB, GPP2, GF46 and GP14 were sequenced and were found to contain ORFS encoding proteins similar to the original applic clones. The TNA resistant of the protein should lead to understanding its role in the pathoenesis of P. carini, pre-encoding and may lead to understanding its role in the pathoenesis of P. carini, pre-encoding and may lead to understanding its role in the contain or pre-ention of information. The TNA relative may be used to make PCR primers for diagnostic use.

The true approach of the protein should lead to understanding its role in the contain or pre-ention of informations. The TNA relative may be used to make PCR primers for diagnostic use.

The true approach of the protein should be added to the contain the sequence below.

The true approach of the protein should lead to understanding its role in the sequence as a second diagnostic use.

The true approach of the protein should be added to the sequence below.

The representable by N in the sequence below.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sape
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Hybridoma 199M and antibody secreted by it - specific for new ratheral integrin subunit, useful to detect subunit in cells and

Variance 8 232, scale 1 435 Mean 11.810. Statistics: Pred. No is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
